Sabethes

	Prealar setae	Upper propisternal setae	Lower mesokatepisternal seta	Upper mesepimeral setae	Foretarsi	Miittarsi	Hindtarsomere 5	Anteproncta color pattern, on dorsal portion	Anteproncta color pattern, on ventral portion	Lateral portion of abdominal segment VI, arrangement of scales	Median longitudinal stripe of dark scales of the scutum distinct from lateral areas	General color of scutum	Spot of the silvery-white scales in the mesopostnotum	White scales on the midtibia	Paddle in the legs	Upper mesepimeral setae color	Postpronota color pattern, on dorsal portion	Postpronota color pattern, on ventral portion	Pale scales on the ventral surface in the base of the femora	Vertex color	Ventral surface of proboscis	Foretarsus, arrangement of white scales	Miittarsus, arrangement of white scales	Presence of paddle	Line of scales with pale golden reflection on the ventral surface of miiiflemora
Sabethes (Sabethes) albiprivus (Morphotype A)	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish Metallic bluish	Absent	Absent	Present	Yellowish	Slightly golden	Same color as dorsal portion	Present	Violaceous Bluish	Entirely dark-scaled			Only in the midlegs	not described
Sabethes (Sabethes) albiprivus (Morphotype B)	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Slightly golden Blue, greenish or violaceous	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish Metallic greenish	Absent	Absent	Present	Yellowish	Bluish	Different color of dorsal portion	Present	Bluish Violaceous	Entirely dark-scaled			Only in the midlegs	not described
Sabethes (Sabethes) amazonicus	Absent	Absent	Present	not described	White-scaling	White-scaling	White-scaled ventrally	blue	Blue, greenish or violaceous	In a straight line	Absent	Metallic bluish	not described	not described	Present	not described	not described	not described	not described	Bluish	not described	Present from tarsomere 3 to basal half of tarsomere 5	Present from tarsomere 2 to basal portion of tarsomere 4	In the fore and midlegs	not described
Sabethes (Peytonulus) aurescens	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	With a line of pales scales				not described
Sabethes (Sabethes) batesi	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Blue, greenish or violaceous	In a straight line	Absent	Metallic bluish	Absent	Absent	Present	Black; a single yellowish seta may be present among black setae	Bluish	Same color as dorsal portion	Absent	Bluish	Entirely dark-scaled			Only in the midlegs	not described
Sabethes (Sabethes) belisarioi	Absent	Absent	Unknown	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	White-scaling	White-scaling	White-scaled ventrally	greenish	Blue, greenish or violaceous	In a straight line	Absent	Metallic greenish	Present	Present	Present	Yellowish	Greenish	Same color as dorsal portion	Present	Bluish	Entirely dark-scaled	Present on tarsomeres 2 and 3 ventrally	Present in tarsomere 2 and most of the tarsomere 3	In the fore, mid and hindlegs	not described
Sabethes (Sabethes) bipartipes	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	White-scaling	Entirely dark-scaled	blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Present	Metallic bluish Metallic greenish	Absent	Absent	Present	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Present only in tarsomere 1	Only in the midlegs	not described
Sabethes (Sabethoides) chloropterus	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	White-scaling	Entirely dark-scaled	blue	Slightly golden	Arranged in a angular incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Presente from base of tarsomere 2 to apex of tarsomere 4		not described
Sabethes (Sabethes) cerqueirai	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	White-scaling	White-scaling	White-scaled ventrally	blue greenish	Blue, greenish or violaceous	In a straight line	Absent	Metallic greenish	Present	Present	Present	Yellowish	Bluish Greenish	Different color of dorsal portion	Present	Bluish	Entirely dark-scaled	Present from apical half of tarsomere 2 to basal half of tarsomere 4	Present from tarsomere 2 to basal portion of tarsomere 4	In the fore, mid and hindlegs	not described
Sabethes (Sabethoides) conditus	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	White-scaling	Entirely dark-scaled	greenish	Slightly golden	With a spot of silver scales limited to base	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Present from base of tarsomere 3 to apex or almost to the apex of tarsomere 4		not described
Sabethes (Sabethes) cyaneus	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Blue, greenish or violaceous	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Present	Black; a single yellowish seta may be present among black setae	Bluish	Different color of dorsal portion	Absent	Bluish	Entirely dark-scaled			Only in the midlegs	not described
Sabethes (Peytonulus) fabricii	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	With a spot of pale scales				not described
Sabethes (Sabethes) forattinii	Absent	Absent	Present	Long, reaching midportion of mesopostnotum	White-scaling	White-scaling	White-scaled ventrally	blue	Blue, greenish or violaceous	In a straight line	Absent	Metallic bluish	Absent	Absent	Present	Yellowish	Bluish	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled	Present on apical half of tarsomere 2 to 4	Present from tarsomere 2 to basal portion of tarsomere 4	In the fore and midlegs	not described
Sabethes (Sabethoides) glaucodaemon	Absent	Present	Present	Long, reaching midportion of mesopostnotum	Entirely dark-scaled	White-scaling	Entirely dark-scaled	greenish	Slightly golden	Arranged in a angular incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Present from apical half of tarsomere 2 to tarsomere 4		not described
Sabethes (Sabethes) gymnothorax	Absent	Absent	Unknown	Long, reaching midportion of mesopostnotum	White-scaling	White-scaling	White-scaled ventrally	blue	Blue, greenish or violaceous	In a straight line	Absent	Metallic bluish	Present	Present	Present	Yellowish	Bluish	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled	Present on tarsomere 3 and most of the tarsomere 4	Present from tarsomere 2 to basal portion of tarsomere 4	In the fore and midlegs	not described
Sabethes (Peytonulus) hadrognathus	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	violaceous-blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
Sabethes (Peytonulus) identicus	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	With a line of pales scales				not described
Sabethes (Sabethinus) idiogenes	Absent	Present	Absent	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	not described	Slightly golden	Different color of dorsal portion	Present	not described	Entirely dark-scaled				not described
Sabethes (Peytonulus) ignotus	Absent	Present	Present	not described	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	not described	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
Sabethes (Sabethinus) intermedius	Absent	Present	Absent	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
Sabethes (Sabethes) lanei	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Blue, greenish or violaceous	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Present	Black; a single yellowish seta may be present among black setae	Bluish	Different color of dorsal portion	Present	Bluish	Entirely dark-scaled			Only in the midlegs	Present
Sabethes (Sabethinus) melanosymphe	Absent	Present	Absent	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Bluish	Entirely dark-scaled				not described
Sabethes (Sabethes) ortizi	Absent	Absent	not described	not described	White-scaling	White-scaling	White-scaled ventrally	greenish	Blue, greenish or violaceous	not described	not described	Metallic greenish	Present	Present	Present	not described	Greenish	Different color of dorsal portion	not described	Bluish	Entirely dark-scaled	Present only in tarsomere 2	Present in tarsomere 2 and most of the tarsomere 3	In the fore, mid and hindlegs	not described
Sabethes (Peytonulus) shannoni	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Dull scales, without metallic sheen	Absent	Absent	Absent	Yellowish	Whitish	Different color of dorsal portion	Present	Violaceous	With a line of pales scales				not described
Sabethes (Davismyia) petrocchiae	Present	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	White-scaling	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden Whitish	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Presente from apical third tarsomere 2 to tarsomere 4		not described
Sabethes (Sabethes) purpureus	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
Sabethes (Sabethes) quasicyaneus	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Blue, greenish or violaceous	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Present	Yellowish	Bluish	Same color as dorsal portion	Present	Bluish	Entirely dark-scaled			Only in the midlegs	not described
Sabethes (Peytonulus) soperi	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	With a spot of pale scales				not described
Sabethes (Sabethes) spixii	Absent	Absent	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Blue, greenish or violaceous	In a straight line	Absent	Metallic greenish	Absent	Absent	Present	Black; a single yellowish seta may be present among black setae	Bluish Greenish	Different color of dorsal portion	Absent	Bluish	Entirely dark-scaled			Only in the midlegs	Absent
Sabethes (Sabethes) tarsopus	Absent	Absent	Unknown	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	White-scaling	White-scaling	White-scaled ventrally	greenish	Blue, greenish or violaceous	In a straight line	Absent	Metallic greenish	Present	Present	Present	Yellowish	Greenish	Different color of dorsal portion	Present	Bluish	Entirely dark-scaled	Present only in tarsomere 2	Present in tarsomere 2 and most of the tarsomere 3	In the fore, mid and hindlegs	not described
Sabethes (Sabethoides) tridentatus	Absent	Present	Present	Long, reaching midportion of mesopostnotum	Entirely dark-scaled	White-scaling	Entirely dark-scaled	blue	Slightly golden	Arranged in a angular incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled		Presente from apical third tarsomere 2 to tarsomere 4		not described
Sabethes (Peytonulus) undosus	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	White-scaled ventrally	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
Sabethes (Peytonulus) wistmani	Absent	Present	Present	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	violaceous	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic greenish	Absent	Absent	Absent	Yellowish	Slightly golden Whitish	Different color of dorsal portion	Present	Violaceous	With a spot of pale scales				not described
Sabethes (Sabethinus) xiphydes	Absent	Present	Absent	Short, not reaching midportion of mesopostnotum, reaching only the lateral portion	Entirely dark-scaled	Entirely dark-scaled	Entirely dark-scaled	blue	Slightly golden	Arranged in rounded or slightly rounded incisions	Absent	Metallic bluish	Absent	Absent	Absent	Yellowish	Slightly golden	Different color of dorsal portion	Present	Violaceous	Entirely dark-scaled				not described
